

Technical & SEO Audit

Comprehensive crawl, technical health & search optimization review

Site audited: <https://www.stealthconnect.ai/>

Report date: May 20, 2026

Prepared by: Website Audit (Technical & SEO Analysis)

Pages crawled: 7 reachable pages

1. Executive Summary

StealthConnect AI is a small Next.js single-page marketing site. All marketing content ("How It Works", "Features", "Pricing", "FAQ") lives as anchor sections on the homepage (`/#pricing` etc.) rather than as standalone pages, concentrating the site's entire SEO footprint on one URL. The audit covered every reachable page. No broken internal links were found, HTTPS is correctly implemented, and the homepage metadata is strong — but several **critical and high-severity title-tag, heading, and metadata defects** need attention.

Audit Scope

Pages crawled (all reachable pages): `/` (homepage), `/login`, `/signup`, `/contact`, `/privacy`, `/terms`, `/gdpr`.

Could not be directly retrieved during this audit (require manual verification): `robots.txt`, `sitemap.xml`, server-side redirect behavior (non-www → www, http → https), HTTP status codes for invalid URLs, and rendered Core Web Vitals. These are flagged as "To Verify" rather than assumed.

2. Critical & High-Severity Issues — Fix First

#	PAGE	CATEGORY	ISSUE	SEVERITY	RECOMMENDED FIX
1	<code>/signup</code>	SEO	Title tag is " Sign In — StealthConnect AI StealthConnect AI " — inaccurate (this is a sign-up page) and identical to <code>/login</code> 's title. Duplicate + wrong title tag.	CRITICAL	Set a unique, accurate title, e.g. <code>Create Your Free Account — StealthConnect AI</code> .
2	<code>/</code>	SEO	No true <h1> element detected. The hero text ("Looking for someone on LinkedIn?") appears to be styled <code>div/span</code> text. The first heading on the page is an <code><h2></code> , breaking the document outline.	HIGH	Wrap the primary hero headline in a single <code><h1></code> containing the core keyword (e.g. "Find Verified LinkedIn Contacts in 30 Minutes").
3	<code>/contact</code> , <code>/privacy</code> , <code>/terms</code> , <code>/gdpr</code>	SEO	Missing meta descriptions. Only the homepage has a meta description; subpage <code><head></code> sections appear to contain little beyond a <code><title></code> .	HIGH	Add a unique 140–160 character meta description to every indexable page.
4	<code>/contact</code> , <code>/privacy</code> , <code>/terms</code> , <code>/gdpr</code>	Technical / SEO	Missing canonical tags and Open Graph / Twitter Card tags. Only the homepage exposes canonical/OG/Twitter meta. Subpages shared on social render with no preview; canonical absence risks duplicate-URL ambiguity.	HIGH	Add a self-referencing canonical link and OG/Twitter tags to every page.
5	<code>/login</code>	Technical	Page returns an empty shell — only a <code><title></code> , no body content rendered on fetch. Indicates a client-only component with no server-rendered fallback; non-JS crawlers see a blank page.	HIGH	Add an SSR/SSG fallback, or apply <code>noindex</code> (see #6). Confirm <code>/signup</code> does not intermittently behave the same way.
6	<code>/login</code> , <code>/signup</code>	Technical SEO	Auth pages appear indexable — no <code>noindex</code> detected and the site-wide robots meta is <code>index, follow</code> . Login/signup pages do not belong in the search index.	HIGH	Add <code><meta name="robots" content="noindex, follow"></code> to both auth pages.
7	<code>robots.txt</code> / <code>sitemap.xml</code>	Technical	Could not be retrieved during the audit. If absent or misconfigured, crawl discovery and indexing are directly affected.	HIGH	Manually confirm <code>robots.txt</code> exists, does not block JS/CSS, and references a valid <code>sitemap.xml</code> that lists all indexable pages and excludes auth pages.

3. Per-Page Findings

/ — Homepage

Category	Issue	Severity	Fix
SEO	No <h1> element (see Critical #2).	HIGH	Add one <h1>.
SEO	Heading hierarchy starts at <h2> . With no <h1>, the document outline is broken; many h2/h3 blocks exist with no top-level heading.	MEDIUM	Fix once the H1 is added; ensure a logical H1→H2→H3 order.
SEO / Technical	Duplicated on-page content. The "How It Works" steps (01/02/03) and the testimonials block each appear twice verbatim in the DOM — a carousel/marquee duplication artifact that bloats indexed content.	LOW-MED	Render carousel items once and clone visually via CSS/JS, or mark duplicates <code>aria-hidden</code> .
Technical	Canonical mismatch: canonical is <code>https://www.stealthconnect.ai</code> (no trailing slash) while the page serves at <code>https://www.stealthconnect.ai/</code> (with slash). A self-referencing canonical should match the served URL exactly.	LOW-MED	Make the canonical exactly match the live URL.
Technical	og:image is 1918x905px — a non-standard, screenshot-like ratio. Recommended is 1200x630 (1.91:1); may crop awkwardly on social platforms.	LOW	Replace with a purpose-built 1200x630 OG image.
SEO	<code>meta keywords</code> tag present — ignored by modern search engines; harmless but obsolete.	LOW	Remove (optional cleanup).
SEO (strategic)	All marketing content (targeting "linkedin contact finder", "email finder", "phone number finder", etc.) lives on one URL . No dedicated feature/use-case/blog pages — limited topical footprint and few internal-linking opportunities.	MEDIUM	Consider standalone pages (/pricing, /how-it-works, a blog) to broaden keyword coverage and internal linking.
Technical	Image <code>alt</code> text could not be fully verified — avatars ("SC", "JD") and icons appear to be text/SVG-based rather than elements.	VERIFY	Confirm all meaningful tags have <code>alt</code> ; mark decorative SVGs <code>aria-hidden="true"</code> .

/login

Category	Issue	Severity	Fix
Technical	Empty server-rendered content (Critical #5).	HIGH	SSR fallback or noindex.
Technical SEO	Likely indexable; should be <code>noindex</code> (#6).	HIGH	Add noindex.
SEO	Title " Sign In — StealthConnect AI StealthConnect AI " — brand name appears twice .	LOW-MED	Use a single brand suffix: <code>Sign In — StealthConnect AI</code> .

/signup

Category	Issue	Severity	Fix
SEO	Wrong + duplicate title (Critical #1).	CRITICAL	Unique, accurate title.
SEO	Brand name duplicated in title ("...StealthConnect AI StealthConnect AI").	LOW-MED	Single brand suffix.
Technical SEO	Likely indexable; should be <code>noindex</code> (#6).	HIGH	Add noindex.
—	Page content (H1 "Start finding contacts.", H2, signup form) renders correctly — no structural heading issue here.	OK	—

/contact

Category	Issue	Severity	Fix
SEO	Missing meta description (#3).	HIGH	Add a unique description.
Technical / SEO	Missing canonical + OG/Twitter tags (#4).	HIGH	Add meta tags.
SEO	Thin content. Page is just two <code>mailto:</code> links and a one-line response-time note — little indexable value and no contact form.	LOW-MED	Add a proper contact form and a few sentences of supporting content.
SEO	No main navigation/footer — only a "Back to home" link (see site-wide issues).	MEDIUM	Add a consistent nav/footer.

/privacy, /terms, /gdpr

Category	Issue	Severity	Fix
SEO	Missing meta descriptions (#3).	HIGH	Add unique descriptions.
Technical / SEO	Missing canonical + OG/Twitter tags (#4).	HIGH	Add meta tags.
SEO	Pages omit the main site navigation and full footer — they carry only a "Back to home" link plus 2-3 cross-links. Reachable from the homepage footer (so not orphaned) but internally isolated — no links back to signup/pricing.	MEDIUM	Use the standard site header/footer on all pages for consistent internal linking and crawl flow.
SEO (minor)	On /gdpr, the individual rights ("Right of Access", "Right to Rectification", etc.) render as bold text, not headings — weak document structure.	LOW	Convert these to <h3> elements.
—	Content depth, H1, and H2 hierarchy on these three pages are otherwise sound.	OK	—

4. Site-Wide & Infrastructure Issues

Category	Issue	Severity	Fix
Technical	<code>robots.txt</code> and <code>sitemap.xml</code> unverified (#7).	Verify	Confirm both exist, are valid, mutually consistent, and exclude auth pages.
SEO	Structured data likely missing. The homepage has an extensive FAQ section (ideal for <code>FAQPage</code> schema), is a product/service (ideal for <code>Organization / Product / SoftwareApplication</code> schema), and shows testimonials. No schema markup was detected.	Medium	Add Organization, FAQPage, and Product/SoftwareApplication JSON-LD; validate with Google's Rich Results Test.
SEO	Inconsistent global navigation. The homepage has a header (Sign In / Get Started) and a rich footer; legal/contact pages have neither.	Medium	Apply one consistent header + footer template across all pages.
Technical	Redirect behavior unverified — confirm http→https and non-www→www (or the reverse) resolve with a single 301 and no redirect chains.	Verify	Test all four entry-point URL variants.
Technical	HTTP status handling for invalid URLs unverified — confirm a non-existent path returns a true <code>404</code> and not a soft-200.	Verify	Request a random invalid URL and inspect the status code.
Technical	Core Web Vitals not measured. The homepage is animation-heavy (scroll effects, marquees, multiple carousels), which commonly degrades LCP and CLS.	Verify	Run PageSpeed Insights / Lighthouse on mobile; watch LCP, CLS, and JS bundle size.
Technical	Viewport meta tag is present (<code>width=device-width, initial-scale=1</code>) — good. Full responsiveness still needs device/emulator testing, especially the pricing estimator and carousels.	Verify	Test on real mobile breakpoints.
SEO	Breadcrumbs absent site-wide. Low priority given the shallow site depth.	Low	Optional; add if the site grows.

What is already working well

- SSL/HTTPS is correctly implemented across all pages.
- The homepage title tag and meta description are well-written and keyword-relevant.
- No keyword cannibalization — a single content page means no internal competition.
- No orphaned pages among those discovered; no broken internal links found while crawling.
- The viewport meta tag is present, and the homepage has complete OG/Twitter/canonical metadata.
- Legal pages (`/privacy`, `/terms`, `/gdpr`) have sound H1/H2 structure and adequate content depth.

5. Recommended Priority Order

#	Priority	Actions
1	IMMEDIATE	Fix the <code>/signup</code> title tag — it is both inaccurate ("Sign In") and a duplicate of <code>/login</code> .
2	HIGH	Add an <code><h1></code> to the homepage; add meta descriptions, canonical tags and OG tags to all subpages; apply <code>noindex</code> to the auth pages; fix the empty <code>/login</code> render; verify <code>robots.txt</code> and <code>sitemap.xml</code> .
3	MEDIUM	Add JSON-LD structured data (Organization, FAQPage, Product); unify the header/footer across all pages; resolve the canonical trailing-slash mismatch; de-duplicate carousel content; run Core Web Vitals testing.
4	LOW	Replace the OG image with a 1200×630 asset; remove the obsolete <code>meta keywords</code> tag; convert the GDPR rights list to headings; expand the thin <code>/contact</code> page with a form and supporting copy.

This audit was conducted by crawling all publicly reachable pages of `https://www.stealthconnect.ai/`. Items marked "To Verify" could not be confirmed remotely during the audit (e.g. `robots.txt`, `sitemap.xml`, server redirects, HTTP status codes, rendered Core Web Vitals) and should be checked directly against the live server and with Google Search Console / PageSpeed Insights. Findings reflect the site state observed on May 20, 2026.
